PROPREP LAUNCHES NEW B2B OFFERING: BOOST

Boost brings Proprep's trusted learning resources directly to educators

London, UK: Two years since the COVID-19 outbreak rapidly forced all university learning to go remote, educators are embracing the advantages of online instruction in combination with a return to face-to-face learning. E-learning company Proprep, longtime advocate of blended learning models, has launched **Boost**, a new educator-facing platform that gives university lecturers access to Proprep's curated STEM content as well as the ability to create their own. Powered by Augmental's award-winning learning technology, Boost offers short, practical video tutorials which improve student engagement and learning outcomes, accessible within an easy-to-use database.

Proprep is a leading provider of high-quality, customised learning resources. Thus far, Proprep's subscription-based service has allowed students to create accounts and individually explore their course library. Boost will give educators access to this library of thousands of video tutorials and practice problems, enabling them to assign work and additional resources to their students. As well as saving lecturers time, this aims to enhance student understanding and improve their academic outcomes, which are easily trackable for educators both individually and as a collective within the platform.

"At Proprep, we believe that STEM subjects are key to the future workforce and a crucial launchpad for social mobility," commented Kate Ryan, Proprep's VP Business Development. "Our educational resources help to reduce dropout rates, ensure higher attainment in core mathematical and scientific skills, and so increase student employability."

Katharine Jackson, Proprep CEO, added, "We care deeply about equality of opportunity, and want to give every STEM student access to trusted learning tools which will enable them to excel. I am delighted that with Boost we have a new platform to foster this goal."

Developed in partnership with Augmental, Boost by Proprep can be used to support flipped classroom models and asynchronous learning, create foundational or prerequisite study for cohorts of mixed abilities, assign a video 'reading' list, or upload lecturers' own content to provide context to existing videos or questions. Launching this week, the first set of courses on Boost covers **Foundational Mathematics**, including College Algebra, Calculus I, and Calculus II, as well as Introductory Statistics and Probability. More information about the platform and resources can be found at www.boost.proprep.com.

About Proprep: Proprep is an education technology company with operations in the UK and the US, which has helped over 500,000 STEM students worldwide to maximise their academic potential since its inception. They focus on customised e-learning resources, specifically bite-sized video tutorials taught in whiteboard technology. Proprep is a subsidiary of Kvasir Education, listed on the Tel Aviv Stock Exchange as KVSIR.
